

# Team Charter & Working Agreement

## Team Members & Roles

Describe each member's role, primary responsibilities, backups/rotation plan, and contact info.

- Katie Kimura
  - Responsible for design and frontend development, but open to working wherever the team needs the most manpower
  - Advocate for user-centered development and responsible for conducting evaluations of designs using personas from [GenderMag](#)
  - Contact information: [kimuraka@oregonstate.edu](mailto:kimuraka@oregonstate.edu)
- Annabel Wang
  - Brainstorming and technical contributions, most familiar with frontend but open to working on backend as well.
  - Contact information: [wanganna@oregonstate.edu](mailto:wanganna@oregonstate.edu)
- Brendon Tran
  - Responsible for both frontend and backend technical contributions. Have experience in both so can switch between them when needed.
  - Experienced with prompt engineering and will be able to support AI backend development.
  - Contact Information: [tranbren@oregonstate.edu](mailto:tranbren@oregonstate.edu)
- Dylan Liu
  - Responsible for managing the GitHub repository and making technical contributions towards the project goal.
  - Is flexible and available to work on HCI design or frontend if applicable.
  - Contact information: [liudy@oregonstate.edu](mailto:liudy@oregonstate.edu) and also available on Discord
- Alina Hyk
  - Primarily responsible for the design, testing, final evaluation, and deployment/integration of AI-generated assignments and custom chatbot features.
  - Alina is also available to contribute to the continuation, testing, and deployment of other AI-based features as needed in terms of their backend operations.
  - Contact information: [hyka@oregonstate.edu](mailto:hyka@oregonstate.edu) and also available on Discord

## Decision-Making Model

- Decisions are made with a majority vote, but only after we have made sure to compromise and address the concerns of every individual involved with the project. Such concerns can be addressed both in-person during the meeting, especially if the issue requires discussion or suggests involvement of project manager Joe, or online on Discord.
  - All teammates are expected to contribute to the resolution of issues and outline their positions with objective arguments.
  - All teammates are committed to ensuring that the resolution of any disagreements remains respectful, objective, and solution-oriented.
- Major project decisions, such as the design and structure of the project, are made alongside with the project partner and the team.
- **Tie-break rule within the team:** if the team encounters a situation in which members' opinions are tied and a solution cannot be reached by majority vote, the team will consult the project partner and instructor team to make the final decision.

## Meeting Cadence & Tools

- Recurring meetings happen in-person on Tuesdays, 11:30am-12:30pm, with the project partner, as well as every two weeks with our project's TA to touch base regarding progress on Sprints. Tools used include Discord for frequent asynchronous communication, as well as Git to drive collaborative development and preserve commit history.
- Teammates are expected to respond within a 24-hour window. If a team member knows in advance that they will be unable to meet in-person or provide timely responses, they should let the rest of the team know as soon as possible so a workaround can be established.

## Risk Management & Escalation Path

- The first of our top project risks is falling behind schedule, especially given the combination of the ambitious project scope, the number of features expected to be integrated, and the tight timeline for deployment to ensure classroom testing (tentatively, the first working prototype is expected to be classroom-tested in Winter 2026).
  - We will use the following early warning signs to catch any increasing chance of this risk: missed deadlines; especially if they occur repeatedly or across the entire team rather than for a single person or within one feature branch.
  - We will also monitor signs of overworking within the team, as this would indicate that the project scope might be beyond realistic expectations given the timeline. In such a case, re-prioritization of main features may be necessary, and additional guidelines for task prioritization will be set after consultation with the project partner.
- The second major project risk we anticipate is a misunderstanding of the requirements as well as potential technical roadblocks. We consider this a top risk because the project is highly complex, with many moving parts that require thoughtful and detailed definitions, hierarchical requirements, and clear evaluation materials to ensure a shared and accurate understanding of all specifications.
- The technical roadblocks are also likely due to the overall system complexity and modularity of the project, as well as the natural division of expertise within the team between backend and frontend development. This division means that each subteam has limited resources and personnel, and additional challenges may arise from the coordination between the two.
  - We will use the following early warning signs to detect this risk: misalignment between expectations and actual results, even on a small scale; repeated disagreement or confusion in meetings regarding next steps or evaluations; and diffusion of focus between frontend and backend integration. We will also treat recurring corrections, frequent changes to requirements or evaluation criteria, and persistent coding errors as additional indicators of this risk.
- Finally, the third potential major risk involves data privacy issues.
  - Early signs of this risk include: leaks of data that were supposed to remain secure; accidental exposure of sensitive information to internal or external communication platforms; disclosure of API keys; misalignment with FERPA or best practice guidelines; or complaints from students or users.
- If a risk arises, the team lead will first address it internally, then escalate to our TA or project partner as needed, providing relevant evidence such as task lists, code snippets, or meeting notes.

## Conflict Resolution & Accountability

Conflicts may arise from miscommunication or disagreements within the team. When issues are noticed, the team will first discuss them together and involve a TA or project partner if needed. Records like PRs, reviews, and attendance will be used to help clarify contributions and maintain accountability.

## Definition of Done (DoD) & Quality Gates

- Self-review of code
  - Adequate commenting done, particularly in hard-to-understand areas
  - Code has been formatted using `npx eslint . -fix`
- Check that documentation is updated with corresponding changes
- When running locally, the changes should not generate any new warnings
- Add tests to prove that changes do not break anything and are effective

## Accessibility & Inclusion Practices

### Meeting Schedule:

- Stakeholder meetings are held weekly on Tuesdays from 11:30 AM to 12:30 PM (PST) and will be done in-person.
  - If a member is not able to attend a Zoom link will be provided for remote access.
- For group assignments, we will maintain a flexible schedule and meeting times to support effective collaboration, whether in person or remotely.

### Note-Taking/Documentation:

- Each meeting will have a designated note-taker responsible for recording key points and ideas.
- A structured meeting plan, along with all relevant materials and documents will be shared with everyone ahead of time to ensure a productive and organized discussion.

### Accommodations/Inclusion:

- Team members that require specific accommodations are encouraged to inform the rest of the team in advance.
- The team will work collaboratively to ensure all participants can engage fully and contribute to the goal of the team.

### Surfacing/Addressing Barriers:

- Any barriers to participation or communication should be addressed directly and promptly with the team and can be communicated through various channels, such as email or Discord.
- The team will review these barriers and agree on appropriate adjustments or improvements to make sure everyone feels comfortable within the team and project.

## Policy Owners & Review Dates

Assign an owner and next review date for each section; explain how updates are proposed and approved.

| Policy                | Policy Owner | Review Date | Update/Approval Process                                                                                            |
|-----------------------|--------------|-------------|--------------------------------------------------------------------------------------------------------------------|
| Decision-Making Model | Dylan Liu    | 11/14/2025  | Update: If an update is proposed, it will be brought up during our stakeholder meetings to get everyone's opinion. |

|                                          |              |            |                                                                                                                                                                                                                                                                                                                      |
|------------------------------------------|--------------|------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                          |              |            | Approval: We will consider and respect everyone's perspectives, working together to reach a collective agreement in the decision-making process before moving on.                                                                                                                                                    |
| Meeting Cadence & Tools                  | Katie Kimura | 11/14/2025 | <p>Update: If an update is proposed, it will be brought up during our stakeholder meetings to get everyone's opinion.</p> <p>Approval: After each stakeholder and team meeting, we will reflect on the effectiveness of our current communication and collaboration methods to identify any needed improvements.</p> |
| Risk Management & Escalation Path        | Annabel Wang | 11/14/2025 | <p>Update: If an update is proposed, it will be brought up during our stakeholder meetings to get everyone's opinion.</p> <p>Approval: If any issues such as delays or roadblocks arise, we will address them promptly as a team and adjust our plan to stay on track.</p>                                           |
| Definition of Done (DoD) & Quality Gates | Alina Hyk    | 11/14/2025 | <p>Update: If an update is proposed, it will be brought up during our stakeholder meetings to get everyone's opinion.</p> <p>Proposal: Any technical related issues or work will be reviewed by both the team and stakeholder(s) before final approval.</p>                                                          |
| Accessibility & Inclusion Practices      | Brendon Tran | 11/14/2025 | <p>Update: If an update is proposed, it will be brought up during our stakeholder meetings to get everyone's opinion.</p> <p>Approval: If any issues or feedback arise, the team will review them collaboratively and reach a consensus before moving forward.</p>                                                   |

## Team Charter & Working Agreement

### Team Members & Roles

Describe each member's role, primary responsibilities, backups/rotation plan, and contact info.

- Katie Kimura
- Annabel Wang
- Brendon Tran
- Dylan Liu
- Alina Hyk

- Responsible for managing the GitHub repository and making technical contributions towards the project goal.
- Is flexible and available to work on HCI design or frontend if applicable.
- Contact information: [ludy@oregonstate.edu](mailto:ludy@oregonstate.edu) and also available on Discord

### Decision-Making Model

State how decisions are made (e.g., consent/majority), quorum, tie-break rules, and which decisions need instructor/partner input.

Decisions are made with a majority vote, but only after we have made sure to compromise and address the concerns of every individual involved with the project. Major project decisions, such as the design and structure of the project, are made alongside with the project partner and the team.

### Meeting Cadence & Tools

List recurring meetings (purpose, length, when/where), required tools (repo, tracker, chat, CI), and response-time expectations.

Recurring meetings happen in-person on Tuesdays with the project partner, as well as every two weeks with our project's TA to touch base regarding progress on Sprints. Tools used include Discord for frequent asynchronous communication, as well as Git to drive collaborative development and preserve commit history. Teammates are expected to respond within a 24-hour window.

  - Is flexible and available to work on HCI design or frontend if applicable.
  - Contact information: [ludy@oregonstate.edu](mailto:ludy@oregonstate.edu) and also available on Discord
- Alina Hyk
  - Primarily responsible for the design, testing, final evaluation, and deployment/integration of AI-generated assignments and custom chatbot features:
    - This includes drafting the plan and prototype for both components: the chatbot and the AI-generated assignment creator, discussing them with the team, and ensuring alignment.
    - It also involves prototyping and designing evaluation automation and unit tests that can be used for initial revisions, implementation planning, and quality assessment before deployment.
    - Finally, Alina is responsible for ensuring smooth integration with the rest of the project's infrastructure and conducting the final set of unit testing and reporting before product launch.
  - Alina is also available to contribute to the continuation, testing, and deployment of other AI-based features as needed in terms of their backend operations.
